Section I: Introduction

The protocol, sponsored by the Department of Defense, is a 6-week study examining whether methylphenidate-induced euphoria can be attenuated by co-administration with naltrexone in medication naïve young adults (age 18-30) who exhibit a euphoric response to methylphenidate. In this double-blind study, subjects will receive methylphenidate and naltrexone or a placebo to treat their ADHD symptoms over the course of the 6-week trial.

Section II: Body

Currently, we are have finished recruiting and enrolling subjects. The first subject was enrolled on January 24th, 2013, followed by a 2-month (no cost) break from the project to allow for Dr. Spencer's full recovery from his emergency coronary bypass surgery. Since the previous period of performance, study enrollment continued to be ahead of schedule. A total of 64 subjects have been initially screened and signed informed consent, compared to 54 subjects in the previous annual performance period. For each subject, clinicians performed a psychiatric evaluation and physical exam, as well as reviewed inclusion and exclusion criteria. The enrollment report can be found at the end of this report in Table A.

Following informed consent and an initial interview with a study physician, research assistants conducted structured interviews (SCID) and assisted the research coordinator in obtaining vital signs, a urine pregnancy and drug test, and administration of an electrocardiogram. A total of 56 subjects completed these further screening procedures, compared to 46 subjects in the previous annual performance period.

After these screening and evaluation procedures, subjects completed the baseline Drug Feeling Visit to determine if they experienced stimulant-induced euphoria. While we initially expected only 38% of participants to experience the desired likeability response (\geq 5 on the Drug Rating Questionnaire DRQ-S), 38 out of 44 subjects that have participated in this visit, or 86.44%, have fulfilled this portion of the inclusion criteria. The previous annual period of performance reported 30 subjects that experienced the stimulant-induced euphoria.

Email: tspencer@partners.org

Thomas J. Spencer, M.D.

Associate Chief, Joint Program in Pediatric Psychopharmacology Associate Professor of Psychiatry Harvard Medical School

Upon completing the baseline Drug Feeling Visit, participants moved on to the randomized clinical trail for treatment with long acting methylphenidate (Ritalin LA) and double blind naltrexone. For this part of the study, participants came in for weekly visits with a study physician to monitor their response to the medication, changes in their ADHD symptoms, and any adverse events that arise. Medication was adjusted per the physicians' discretion and, depending on the response of the subject, may be titrated up to a maximum daily dose of 1.3mg/Kg/day. At the weekly visits, clinicians completed the AISRS and the CGI-ADHD to assess the subjects' ADHD symptoms and improvement.

On the week 3 and week 6 visits, subjects repeat the protocol from the Drug Feeling Visit with single day, double-blind doses of instant release methylphenidate (IR MPH). Whereas the rating scales used following single blind IR MPH determine subject eligibility at the baseline Drug Feeling Visit, the same rating scales during the Week 3 and Week 6 Drug Feeling Visits are used as outcome measures. A total of 31 subjects have completed the Week 3 Drug Feeling Visit, which is the midpoint of the study and the point at which their data is useful for analysis. The previous annual performance period reported 21 subjects to have completed this visit. Moreover, as this trial aims to collect data from 30 subjects, we have exceeded this data collection goal, and thus will not be recruiting any more subjects, as stated in Quarterly Technical Progress Report 8. Finally, 25 subjects have completed the entire study (6 weeks), compared to 18 subjects in the previous annual performance period.

The remaining subjects did not complete the study for various reasons. A total of 12 subjects were found ineligible after they consented, which were either due to cardiovascular concerns about using stimulant treatment, a positive urine drug screen, comorbidity, or failure to experience stimulant-induced euphoria on the baseline Drug Feeling Visit. A total of 23 subjects have withdrawn or were later dropped due to being lost to follow-up, the demanding time commitment of participating in the study, or plans of moving out of the area. Finally, a total of 4 subjects have been terminated from the study due to adverse events. Of these subjects, one developed negative mood side effects, most likely attributed to the study medication, and was

Email: tspencer@partners.org

Thomas J. Spencer, M.D.

Associate Chief, Joint Program in Pediatric Psychopharmacology Associate Professor of Psychiatry Harvard Medical School

subsequently terminated from the study and transitioned to clinical care for her ADHD treatment and to monitor her mood. Another subject was terminated after he developed enlarged lymph nodes throughout his abdominal cavity, which was later identified as cancer. Study staff notified the Partners Healthcare IRB of this event, which confirmed the clinical assessment that this event was unrelated to study medication. The third subject experienced a reoccurrence of her peptic stress ulcers, and was thus terminated from the study and triaged to clinical care for her ADHD treatment. Lastly, one subject experienced substantial nausea and vomiting after taking the medication, and was therefore transitioned to clinical care for continued treatment of her ADHD symptoms.

Several administrative changes have also occurred since the previous annual performance period. Approved on December 8th, 2014, this amendment notes several small adjustments, including correction of inaccuracies in the description and citations of cognitive assessments in the protocol, the option for subjects to substitute previous cognitive assessments and structured clinical interviews done in the previous year at the baseline visit, updating study staff contact information on the consent form, updating the consent form, detailed protocol, and protocol summary to reflect the Partner's new electronic medical record system, giving subjects the option to receive text message appointment reminders, and updating the online IRB platform description of the study.

In addition, a Major Deviation/Other Event was reported to the Partners IRB on February 19th, 2015. This "Other Event" noted a laboratory error, in which a Hepatic Panel was not ordered among the other blood work. In an abundance of caution, hepatic enzyme tests were included in the protocol for an extra level of safety, although they are not clinically necessary. This incident does not indicate any increased risk of harm to subjects because the study uses the recommended dose of naltrexone (50 mg), and not higher doses of naltrexone that have been associated with transient increases in hepatic enzymes. Further, subjects were clinically monitored on a weekly basis and did not show signs suggestive of hepatitis. The Partners IRB noted this event and indicated no further action was necessary.

Email: tspencer@partners.org

Thomas J. Spencer, M.D.

Associate Chief, Joint Program in Pediatric Psychopharmacology Associate Professor of Psychiatry Harvard Medical School

On March 17th 2015, the IRB approved the Continuing Review for the study. Prior to submitting the Continuing Review, the Data and Safety Monitoring Board (DSMB) for the protocol convened to review the current status of the study. On March 4th, 2015, the Chair of the DSMB, Joseph Gonzalez-Heydrich, MD, informed study staff that the DSMB unanimously agreed that they see no reason to stop the study. After IRB approval, the 2015 Continuing Review was then submitted along with all supplemental materials to the USAMRAA Human Research Protection Office for review on April 17th, 2015. Natalie Klein, PhD, CIP sent confirmation on May 6th, 2015 that the Continuing Review was received. On September 15th, 2015, Laura R Brosch CIV sent confirmation that the US Army Medical Research and Material Command (USAMRMC), Office of Research Protections (ORP), and Human Research Protection Office (HRPO) found the protocol to be in compliance with Federal, DoD, and US Army human subjects protections requirements and approved continuation of the protocol through April 24th, 2016.

Lastly, due to exceeding our goal of 30 subjects exposed to study medication, we submitted an amendment to the Partners IRB to change the enrollment status to "Closed to Enrollment: All research activities complete, long term follow-up only." This amendment was approved on June 17th, 2015. Moreover, please refer to the Appendix for documentation of all study amendments.

Section III: Key Research Accomplishments

- ❖ On December 8th, 2014, the Partners IRB approved an amendment to clarify description and distribution of cognitive assessments and sending text messaging appointment reminders to subjects
- ❖ On February 19th, 2015, the Partners IRB noted the Major Deviation/Other event regarding laboratory error and indicated no further action necessary
- On May 17th, 2015, the Partners IRB approved the Continuing Review for the study.

Email: tspencer@partners.org

Thomas J. Spencer, M.D.

Associate Chief, Joint Program in Pediatric Psychopharmacology Associate Professor of Psychiatry Harvard Medical School

- ❖ On, June 17th, 2015, the Partners IRB approved the change of enrollment status to "Closed to Enrollment: All research activities complete, long term follow-up only."
- ❖ On September 15th, 2015, USAMRMC Office of Research Protections found the protocol to fully comply with DoD US Army and USAMRMC human subjects protection requirements and approved continuation of the protocol through April 24th, 2016.
- ❖ 64 subjects have been consented and enrolled.
- ❖ 56 subjects have completed all screening procedures.
- ❖ 44 subjects have participated in the baseline Drug Feeling Visit, 38 of which experienced stimulant-induced euphoria.
- ❖ 31 subjects have completed the Week 3 Drug Feeling Visit, out of a goal of 30 subjects.
- ❖ 25 subjects have completed the entire study.

Section IV: Reportable Outcomes

To date, we have completed the 6-week clinical study since 31 subjects have completed the Week 3 Drug Feeling Visit, exceeding the original goal of 30 subjects. We have begun the process of cleaning the data and initial analyses. We are in the process of requesting a no cost extension to permit further analysis of primary and important secondary outcomes and prepare presentations and manuscripts.

Section V: Conclusion

While stimulant medicines are documented effective treatments of ADHD across the lifecycle, persistent concerns remain about their abuse potential that greatly inhibit their therapeutic use in clinical practice. Unfortunately, untreated ADHD is associated with high levels of impairment and disability that can profoundly adversely impact the lives of those affected during and after their military service. These include difficulties performing complex and demanding cognitive tasks under time constraints as required in the military, deficits in impulsivity, distractibility and emotional regulation that could endanger the life of the affected soldier and his or her peers, deficits in the interactions with peers and superiors, emotional impulsivity that could lead to low self esteem, substance abuse, criminality and accidents [1].

ADHD also affects veterans. Upon returning to civilian life, military personnel face many

Email: tspencer@partners.org

Thomas J. Spencer, M.D.

Associate Chief, Joint Program in Pediatric Psychopharmacology Associate Professor of Psychiatry Harvard Medical School

hurdles in redefining their role in society and securing employment. ADHD can certainly affect the ability to negotiate this transition. One stark example of this very issue is a study of homeless veterans that found that the majority (50/80) had ADHD [2]. Thus, the safe and effective treatment of ADHD is of great importance for military personnel after active service.

In addition to causing serious problems for enlisted personnel and veterans, ADHD is also a serious problem for military families. Since ADHD is estimated to afflict up to 10% of children, a sizable number of servicemen's children may be afflicted with ADHD and suffer from its adverse impacts on the family and school. Such concerns may distract the enlisted man and interfere with the soldier's ability to perform his or her duties effectively during their absence from home. Thus, safe and effective treatment for ADHD can have a substantial, direct benefit to the families of servicemen and the piece of mind of the enlisted soldier.

Stimulants have long been used by the military for non-ADHD indications in the context of sleep loss and stress to diminish fatigue and motion sickness [3] as well as enhance alertness of pilots during lengthy flight [4, 5] as well as to enhance the abilities, marksmanship, cognitive performance and mood of soldiers [6-8].

Yet, despite their clear and unequivocal benefits, stimulants can also be abused. For example, in a study of almost 20,000 army inductees, 12 % (2,369) reported that they had used amphetamines prior to enlistment. This number represented 38% of all cases of drug use [9]. Further surveys indicate that 10 % of military personnel abuse stimulants during active duty [10] and there is increasing concern that stimulant misuse is often from diverted prescriptions. The concern about abuse potential of stimulants is compounded by the fact that ADHD is a known risk factor for drug and alcohol abuse and dependence [11]. Hence a safe stimulant formulation free of abuse potential would allow for effective treatment of ADHD for active military personnel, their children as well as veterans without concerns about misuse, abuse and diversion.

In addition to other researchers, we have documented that stimulants mediate abuse through their effects on brain opioid receptors [12]. This insight allowed us to posit a novel pharmacological approach to help mitigate the emergence of stimulant-associated abuse through

Email: tspencer@partners.org

Thomas J. Spencer, M.D.

Associate Chief, Joint Program in Pediatric Psychopharmacology Associate Professor of Psychiatry Harvard Medical School

blocking opiate receptors with Naltrexone, an opiate receptor antagonist. Thus, our study could lead to the development of an abuse-free stimulant that could provide the first effective and non-addictive stimulant treatment for ADHD. Such a treatment could have profound benefits to enlisted soldiers, veterans and their families, their treating physicians, and the military at large.

Section VII: Appendix

Documentation of all Study Amendments through September 2015

AME 1 IRB Approval: 8/29/12

Approves revised Consent Form (1):

- 1. Changing study coordinator contact information;
- 2. Correcting minor formatting inconsistencies;
- 3. Clarifying that subjects will be taking Naltrexone (or placebo) once daily for the entire study, but will be taking SODAS-MPH twice daily for the entire study;
- 4. Removing reference to "study diaries" as subjects will not complete diaries as part of this trial.

AME 2 IRB Approval: 9/28/12

Added: Ariana Koster as a Research Coordinator/Mgr

AME 3 IRB Approval: 11/2/12

Approves revised Protocol Summary and Detailed Protocol decreasing the dose of naltrexone to 25 mg daily if the 50 mg dose is not well tolerated.

AME 4 IRB Approval: 11/15/13

Added: Jefferson Prince MD as a Co-Investigator. Removed: Anela Bolfek MD

AME 5 IRB Approval: 11/28/12

Approves revised Detailed Protocol (dated 06/15/2012) and Consent Form (1):

- 1. Changing the IR-MPH dosing to single-blind on the first likability assessment day (pre-baseline) only. The IR-MPH dosing will remain double-blind at the week 3 and week 6 likability assessments;
- 2. Adding handout "Likability Assessment Day Instructions;"
- 3. Executing the clinical blood labs on the first likability assessment day instead of at the initial visit.

AME 6 IRB Approval: 12/7/12

Notification that the Certificate of Confidentiality CC-MH-12-184 (dated 10/23/2012) has been approved by the NIMH.

AME 7 IRB Approval: 12/29/12

- 1. Increase of age range for eligible participants from 18-24 to 18-30.
- 2. Subjects will be seen at a Massachusetts General Hospital outpatient site located at 55 Fruit St. WRN 705. Boston, MA 02114, instead of at 185 Alewife Brook Pkwy, Suite 2000. Cambridge, MA 02139.
- -A revised Detailed Protocol, Protocol Summary (Version Date: 12/04/2012), and one Informed Consent (Version Date: 12/04/2012) reflect the changes made.

Email: tspencer@partners.org

Thomas J. Spencer, M.D.

Associate Chief, Joint Program in Pediatric Psychopharmacology Associate Professor of Psychiatry Harvard Medical School

AME 8 IRB Approval: 1/2/13

Added: Andrea Spencer MD & Mai Uchida MD as Co-Investigators.

AME 9 IRB Approval: 2/5/13

Approves use of "Addiction Research Center Inventory -- Subject" form to be completed by the participant after completing the DQRS.

AME 10 IRB Approval: 2/4/13

Added: Emma Issenberg as a Reg. Coordinator/mgr. Removed: Paul Hammerness MD

AME 11 IRB Approval: 3/20/13

Added: Christopher Keary as a Co-Investigator

AME 12 IRB Approval: 3/14/13

Updated the Consent Form with the Principal Investigator's current contact phone number and reworks the description of the office location to improve clarity (p.2).

AME 13 IRB Approval: 7/16/13

Added: Rebecca Grossman as a Research Assistant.

AME 14 IRB Approval: 8/13/13

Approves posting for the MGH Clinical Trials Website and Broadcast emails, images and text for Facebook advertising, and a Facebook Ad Landing Page (the internet webpage that will open if potential subject clicks on the Facebook advertisement).

AME 15 IRB Approval: 9/19/13

Added: Olivia Bogucki, Stephannie Furtak, Brittany Hughes, Tara Kenworthy, Amanda Pope, and Courtney Zulauf as research assistants.

Removed: Emma Issenberg and Katie McDermott from study staff.

AME 16 IRB Approval: 10/15/13

- 1. Approves the option of breaking up the first screening visit so that it can be completed over the course of several days
- 2. Updates protocol documents to accurately reflect that Joseph Gonzalez-Heydrich, M.D. is the DSMB chair, not Marlene Freeman, M.D.
- 3. Corrects an error on the Consent Form that states that subjects will know whether they are receiving IR-methylphenidate or placebo on the Drug Feeling Visit. Subjects will not know whether they receive the active drug or placebo
- 4. Updates the length of the Drug Feeling Visit indicated on the Consent Form from 8 hours to 10-11 hours
- 5. Removes the text on the Consent Form stating that the Drug Feeling Day will take place within a month of the first Screening Visit
- 6. Updates study documents to include contact information for Dr. Andrea Spencer, an additional study clinician.

Email: tspencer@partners.org

Thomas J. Spencer, M.D.

Associate Chief, Joint Program in Pediatric Psychopharmacology Associate Professor of Psychiatry Harvard Medical School

AME 17 IRB Approval: 12/2/13

Approves the addition of urine drug screens based on clinician assessment of the subject's drug use history and concerns of the subject using drugs after the initial screen. These additional urine drug screens may be conducted as frequently as each study visit and, like the baseline urine drug screen, will be labeled only with coded identifiers, and will be kept separate from the subject's medical record.

AME 18 IRB Approval: 1/17/14

Approves revised Protocol Summary and Detailed Protocol allowing subjects to complete visits 4, 5, 7, and 8 by phone and subjects may not complete two consecutive visits by phone. Consistent with office visits, all rating scales and assessments will be complete by a licensed psychiatrist during study phone visits, with the exception of collecting vital signs.

AME 19 IRB Approval: 2/3/14

Approves revised Protocol Summary (dated 02/03/2014), Detailed Protocol (dated 02/03/2014), and Consent Form (dated 02/03/2014) updating the Demographic Interview to be collected using a new form.

AME 20 IRB Approval: 3/12/14

Removes Jefferson Prince, M.D. from study staff.

AME 21 IRB Approval: 5/6/14

Adds Leah Feinberg to study staff as the Regulatory Coordinator/Manager.

AME 22 IRB Approval: 5/29/14

Adds Brittany Albright, M.D. to study staff as a Co-Investigator.

AME 23 IRB Approval: 6/22/14

Added Lauren Rhodewalt to study staff as a Research Assistant.

AME 24 IRB Approval: 7/14/14

Added Anna Hall to study staff as Clinical Research Coordinator.

AME 25 IRB Approval: 7/24/14

Updated funding information in EPIC, the new healthcare software.

AME 26 IRB Approval: 7/28/14

Added Jessica Abrams to study staff as a Research Assistant and removes Rebecca Grossman.

AME 27 IRB Approval: 7/31/14

Added Nicholas Carrellas, Kristina Conroy, Jacqueline Davis, Emily Grimsley, and Natalie Plascencia to study staff as Research Assistants. Also added Amy Yule MD to study staff as Co-Investigator.

Email: tspencer@partners.org

Thomas J. Spencer, M.D.

Associate Chief, Joint Program in Pediatric Psychopharmacology Associate Professor of Psychiatry Harvard Medical School

AME 28 IRB Approval: 9/8/14

Added James Chan to study staff as a Statistician.

AME 29 IRB Approval: 12/8/14

- 1. Correct inaccuracies in the descriptions and citations for the cognitive assessments in the detailed protocol.
- 2. Update consent form and protocol: Use data from a subject's previous structured clinical interview or cognitive-neuropsychological exam if the assessment has been completed in the past year as part of another study
- 3. Update the Consent Form and recruitment material to reflect the contact information for the study's new coordinator.
- 4. Update the Consent Form, detailed protocol, and protocol summary to reflect that participation in the study and information related to general medical care may be added to the subject's electronic medical record.
- 5. Update the Consent Form, detailed protocol, and protocol summary to allow subjects the option to receive text message appointment reminders.
- 6. Update the study population in the description of the study in the online IRB platform to reflect the age range in the inclusion criteria, which were already updated in all other study documents in Amendment 7 (12/29/12).

AME 30 IRB Approval: 12/17/14

Removed Daniel Grossman and Arrielle Bressler Lopez. Added to study staff Sarah Kassabian and Jennifer Wicks as Research Assistants, as well as Atilla Ceranoglue MD and Jane Viner MD as Co-Investigators.

AME 31 IRB Approval: 3/6/15

Removed Christopher Keary MD from study staff.

AME 32 IRB Approval: 4/14/15

Removed Stephanie Furtak from study staff.

AME 33 IRB Approval: 6/17/15

- 1. Correcting inaccuracies in the descriptions and citations for the cognitive assessments;
- 2. Explicitly stating that subjects may request to receive the results of their cognitive testing;
- 3. Approves Cognitive Results Letter (Regular) Cognitive Results Letter (poor);
- 4. Changing the protocol status to Closed to Enrollment: All research activities complete, long term follow-up only.

AME 34 IRB Approval: 6/26/15

Removed Emily Grimsley, Brittany Hughes, Tara Kentorthy, Amanda Pope

Table B: Adverse Events Log

Adverse Event Tracking Log

Adverse events are "any untoward or unfavorable medical occurrence in a human subject including any abnormal sign, symptom or disease,...whether or not associated with the subject's participation in the research". Internal adverse events that are unexpected and related/possibly related to the research and external adverse events that are serious, unexpected and related/possibly related must be reported to the IRB within 5 working days/7 calendar days of the date the investigator first become aware of them. Adverse events that are expected i.e., documented in the protocol are not reported to the IRB. For investigator-monitored studies a cumulative report of all adverse events must be submitted at continuing review.

Instructions: This log facilitates tracking and timely reporting of all applicable adverse events according to PHRC Reporting Unanticipated Problems including Adverse Events policy: http://healthcare.partners.org/phsirb/Guidance/Reporting_Unanticipated_Problems_including_Adverse_Events.1.11.pdf. A key for recording adverse event data is attached to this log. NOTE: Entries in the log must be typed.

Table C: Minor Deviations

Minor Deviations Tracking Log

Protocol deviations are any deviation from the IRB-approved protocol that are not approved prospectively by the IRB. Major protocol deviations are deviations from the IRB approved protocol that "has the potential to negatively impact subject safety, the integrity of study data or subject's willingness to participate in the study". Minor protocol deviations are deviations that do not have the potential to negatively impact subjects, their willingness to participate or data integrity. Minor deviations include, but are not limited to, protocol deviations such as out of window visits, missing tests/labs, missing original/signed consent form (copy exists), missing PI signature on consent form(s), use of expired/outdated consent form that includes all relevant information, over-enrollment, failure to submit continuing review prior to expiration of IRB approval.

Instructions: This log is to be used for tracking and reporting minor deviations according to Reporting Unapproved Deviations in PHRC-Approved Research policy: http://healthcare.partners.org/phsirb/Guidance/Reporting Unapproved Deviations in PHRC-Approved Research.1.11.pdf. Minor deviations are to be reported ONLY at continuing review. NOTE: Entries in the log must be typed.

6/14/13	6/14/1:		completed on Drug Feeling visit after 2 different phlebotomy-trained RAs attempted to locate the subject's veins but were unable to.	Under instruction of the PI, we will continue without 1770201's blood sample. A note to file was prepared to explain this. While safety labs are usually completed at this visit, 1770201 did not meet criteria at the Drug Feeling Visit and therefore 1770201 will not be able to move to the randomized trial. Thus the safetty labs were not completed.	N/A	N/A	Ariana Koster 6/20/13
8/5/13	8/5/1:		At the Drug Feeling Visit, subject 1770401 informed study staff last minute that he had to leave early and did not complete the final DRQS and ARCI.	Under direction of the PI, we will proceed without having the subject complete these rating scales. A note to file was prepared to explain the situation. The subject was reminded of the time commitment necessary to participate in the study.	N/A	N/A	Ariana Koster 8/5/14
8/24/13	8/24/1:	1770401	The Blood draw was not completed on Drug Feeling visit after 2 different phlebotomy-trained RAs attempted to locate the subject's veins but were unable to	Under instruction of the PI, we will continue without 1770401's blood sample from this visit. A note to file was prepared to explain this. The missed blood draw did not include safety labs,	N/A	N/A	Ariana Koster 8/27/14
9/16/13	9/16/1:	3 1770401		Under instruction of the PI, will continue without 1770401 blood sample from this visit. The missed blood draw did not include safety labs.	N/A	N/A	Ariana Koster 9/17/13
9/17/13	7/16/1:	1770701	Subject 1770701's screening procedures were completed over several visits.	This policy is consistent with other studies within the department and we have submitted an amendment to allow the screening procedures to be broken up over several days, going forward.	N/A	N/A	Ariana Koster 9/17/13
8/3/13	8/3/1:		The Blood draw was not completed on Drug Feeling visit after 2 different phlebotomy-trained RAs attempted to locate the subject's veins but were unable to.	Under instruction of the PI, we will continue without 1770701's blood sample from this visit. 1770701 went to the MGH official lab to complete her safety labs for the visit after she was done with her study visit. A note to file was prepared to explain this.	N/A	N/A	Ariana Koster 9/17/13
9/17/13	8/2/1:	3 1770601	Subject 1770601's screening procedures were completed over several visits.	This policy is consistent with other studies within the department and we have submitted an amendment to allow the screening procedures to be broken up over several days, going forward	N/A	N/A	Ariana Koster 9/17/13

10/25/13	10/2/13	1770501	The first and second screening visit were completed over a month apart	This policy is consistent with other studies within the department and we have submitted an amendment to allow this going forward.	N/A	N/A	Ariana Koster 10/25/13
10/27/13	10/27/13	1770601	Subject 1770601 did not complete a blood draw on her week 6 Drug Feeling Visit. Subject 1770601 became sick to her stomach the second hour after her morning dose. While subject 1770601 wanted to finish the study visit, she felt as though a blood draw would exacerbate her nausea and requested that we not draw her blood.	Since this blood draw is not essential for subject safety or the integrity of the study data, under the direction of the PI we will forgo the blood samples from this visit. A note to file was prepared to document this.	N/A	N/A	Ariana Koster 10/28/13
11/19/13	11/19/13	1770301	Subject 1770301's week 3 visit was 13 days after his week 2 visit, outside of the 9 day visit window.	Study staff were reminded of the importance of scheduling study visits within 9 days of the last study visit. The subject was reminded to contact study staff with any study related problems between visits.	N/A	N/A	Ariana koster 11/22/13
12/7/13	12/7/13	1772501	After subject Subject 1772501's screening visit, study staff 1772501 that her EKG had been incorrectly administered. We therefore readministered the EKG at the beginning of her Drug Feeling Visit, prior to administering the study drug.	The EKG was completed and signed off by a study physician prior to completing any Drug Feeling Visit tasks. Study staff was reminded to confirm that the EKG was properly administered before the end of the Screening visit visit. A note to file was prepared to document this.	N/A	N/A	Ariana Koster 12/11/13
12/12/13	12/12/13	1771201	At his first Drug Feeling Visit, subject 1771201 informed study staff last minute that he had to leave early and did not complete the final DRQS and ARCI.	As compliance during study visits has been a consistent problem for subject 1771201, study staff decided to terminate Subject 1771201 from the trial.	N/A	N/A	Ariana Koster 12/12/13
12/13/13	12/13/13	1771701	Subject 1771701's week 6 visit was 10 days after her week 5 visit, outside of the 9 day study window.	Study staff were reminded of the importance of scheduling study visits within 9 days of the last study visit. The subject was reminded to contact study staff with any study related problems between visits.		N/A	Ariana Koster 12/13/13
12/20/13		1772501	able to complete part of her Cognitive Battery assessment during her week 0 visit as her visit with the clinician ran late and she had to leave for a previous engagement.	Subject 1772501 completed the rest of her Cognitive Battery assessment at her wk1 visit. Subject 1772501 was reminded to budget sufficient time to complete all study tasks and to leave extra time in her schedule in case her visit runs late. A note to file was completed. 9/27/14	10/24/	4 1775201	Morning and afternoon doses on Drug Feeling Visits are randomized (and double-blinded). The subject was accidentally given the afternoon designated dose in the morning and vice versa for the afternoon. No blood was drawn on this visit, so this data is not threatened. There is no impact on subject safety.	Study staff searched all records for similar errors to ensure data integrity. All study staff have been reminded of the importance of double checking the labels on medication bottles. A check was added to the Task Sheet to ensure that this double-checking occured.	N/A	N/A	Anna Hall 10/24/14
